
IMPERANDI
Conquer your medical imaging data
User & Clinical Expert
design the study
Dataset Configuration File
filters · rules · parameters
1 Ingest & Curate
index, filter and annotate DICOM
Hospital PACS export
Files, DICOMDIR, archives
Parse
Index DICOM metadata
Clean
Standardize metadata
Filter relevant series
Curate
Identify sequence & phase
Score by diagnostic suitability
Curated DICOM cohort
patient_key · volume_id · phase
2 Process Images
modular CT/MRI processing
Curated DICOM cohort
Convert to NIfTI
Slices to volumes
Segment & Postprocess
Generate ROI masks
Refine masks
Register
Align scans to common space
Scans & ROI masks
nifti_path·mask_organ_path
3 Extract Features
optional radiomics extraction
CT/MRI volumes & masks
Radiomics
Quantitative features
Feature table
shape· intensity · texture
Downstream Analysis & Research Applications
classification · survival · biomarkers
Shared cohort IDs link metadata, scans, masks & features
Logs & diagnostics
Checkpoint & resume
Parallel execution
Extensible workflows
Interactive quality control
review processed exams
